

Dele Adeyemi

Senior Software Engineer | Lagos, Nigeria | +234-701-456-2893 | dele.adeyemi@mailbox.ng

EXPERIENCE

Senior Backend Engineer | Meridian Logistics Systems | Lagos, NG | Mar 2024 – Present

- Architected and deployed an LLM-powered shipment exception handler that processes 8,000+ daily alerts, reducing manual triage time by 72% across 12 regional warehouses
- Integrated Claude API with custom prompt engineering for contextual decision-making on delayed shipments, damaged goods, and routing conflicts; routed 94% of exceptions to appropriate departments without human review
- Built RAG pipeline indexing 18 months of historical shipment data, enabling the agent to retrieve relevant precedents and regulations for each exception decision
- Implemented robust retry logic and cost controls; maintained 99.2% uptime with <\$40/day API spend on production traffic
- Collaborated with supply chain directors and warehouse managers to refine agent behavior through monthly feedback loops; achieved 87% user satisfaction on routing decisions

Backend Engineer | Freight Flow Technologies | Lagos, NG | Aug 2021 – Feb 2024

- Designed and maintained core order-management microservice handling 500K+ shipments monthly; reduced latency from 850ms to 280ms through connection pooling and caching strategies
- Built event-driven architecture using Kafka to synchronize inventory, billing, and customer notification systems across 4 distribution centers
- Owned integration with third-party carrier APIs (DHL, FedEx, local couriers); established webhooks for real-time tracking updates and automated invoice reconciliation
- Deployed on AWS (EC2, RDS, Lambda); automated infrastructure provisioning with Terraform, reducing deployment time from 45 minutes to 8 minutes
- Led on-call rotation and incident response; reduced MTTR for shipment-blocking failures from 35 minutes to 12 minutes

Software Engineer | Connexus Platform Services | Abuja, NG | Jun 2019 – Jul 2021

- Developed fulfillment scheduling service processing 2,000+ daily requests across marketplace sellers; implemented constraint-based allocation logic to maximize warehouse utilization
- Created REST APIs for warehouse management system used by 15+ partner logistics companies; documented OpenAPI specifications and maintained backward compatibility across 3 major versions
- Optimized PostgreSQL queries reducing p95 query latency by 58%; implemented read replicas for analytics queries to isolate OLTP workload
- Mentored 2 junior engineers on cloud deployment practices and code review standards

Junior Software Engineer | TechBuild Solutions | Lagos, NG | Jan 2018 – May 2019

- Built batch processing pipeline for inventory reconciliation, reconciling 50K+ SKUs nightly across multiple warehouse locations
- Maintained internal Python libraries for HTTP client pooling and retry logic; used by 12 services
- Wrote integration tests for payment gateway and logistics partner APIs; improved test coverage from 41% to 67%

SKILLS

Python, Go, PostgreSQL, Redis, AWS (EC2, RDS, S3, Lambda), Kafka, Terraform, REST APIs, LLM integration (Claude, prompt engineering), RAG systems, Docker, Git, Linux

EDUCATION

B.Sc. Computer Science | University of Lagos | 2017
