

Ingrid Solberg

Senior Software Engineer

Seattle, WA 98101 | (206) 555-0847 | ingrid.solberg@email.com

SKILLS

Languages: Python, TypeScript, Java, SQL

Platforms & Tools: AWS (Lambda, RDS, SQS), Docker, Kubernetes, Git, Jira

Fintech & Payments: REST APIs, PCI compliance, transaction processing, webhook integration, payment reconciliation

AI/ML: Prompt engineering, LangChain, OpenAI API, retrieval-augmented generation (RAG), vector databases

Databases: PostgreSQL, Redis, DynamoDB

Other: CI/CD pipelines, unit testing, API documentation, incident response

EXPERIENCE

Software Engineer II, Meridian Payments | Seattle, WA | January 2024 – Present

- Contributed to the customer dispute resolution platform, which processes 50K+ chargebacks monthly across three payment corridors. Worked within a cross-functional team of six engineers to design and deploy transaction status APIs consumed by 12 partner integrations.
- Built and maintained Python microservices that validate incoming transaction metadata against compliance rules, catching 94% of malformed payment data before downstream processing. Service handles 2.1M requests daily.
- Implemented a retrieval-augmented generation (RAG) system using LangChain to assist the support team in searching historical disputes and generating templated responses. Indexed 18 months of dispute records into a vector database; accuracy of retrieved cases improved support response time by 22%.
- Collaborated with product and compliance teams to scope three quarterly feature releases, translating regulatory requirements into technical specifications and attending weekly sync meetings to unblock integration partners.
- Debugged and resolved a critical webhook delivery bug affecting merchant notifications; coordinated with the payments infrastructure team and drafted post-incident documentation used across the organization.

Backend Engineer, Vault Systems | Portland, OR | June 2023 – December 2023

- Developed backend features for an encrypted credential storage platform serving 200+ enterprise clients in financial services. Contributed to a Java service managing token lifecycle and encryption key rotation.
- Extended the transaction audit logging system to capture all credential access events; this system now generates compliance reports consumed by six Fortune 500 financial institutions monthly.
- Wrote integration tests and database migration scripts for a project to migrate 18M credential records to a new schema; worked closely with database and DevOps teams to execute the migration with zero downtime.
- Participated in sprint planning and code reviews, providing feedback on API design and security considerations for authentication endpoints.
- Diagnosed and fixed a memory leak in the credential caching layer that was causing service restarts; implemented monitoring alerts to detect similar issues in production.

Junior Software Engineer, FinTech Innovations Lab | Portland, OR | August 2022 – May 2023

- Assisted in building a prototype payment gateway focused on real-time settlement. Developed Python scripts to normalize transaction data from multiple card networks and load it into a data warehouse.
- Contributed to an internal tool that used GPT-4 to auto-classify transaction disputes based on merchant category and chargeback reason codes. Fine-tuned prompts to improve classification accuracy from 71% to 84% on a validation set of 5K disputes.

- Wrote unit tests and documentation for webhook handlers that ingested settlement files from upstream payment processors; handlers processed 500+ files per day with 99.7% reliability.
- Collaborated with a senior engineer to troubleshoot latency issues in the reconciliation pipeline; identified N+1 database queries and reduced query time by 65%.
- Participated in daily standups and quarterly planning sessions; gathered requirements from operations staff for two new reporting features.

EDUCATION

B.S. in Computer Science, University of Washington | Seattle, WA | Graduated May 2022

CERTIFICATIONS

- AWS Certified Cloud Practitioner (2023)
