

Jonah Steinberg

Infrastructure & Developer Tools Engineer

(617) 284-9103 | j.steinberg@email.com | Boston, MA | github.com/jsteinberg

PROFESSIONAL SUMMARY

Infrastructure engineer with 2+ years building developer-facing tools and deployment systems. Hands-on experience integrating LLM APIs into CI/CD pipelines and maintaining build infrastructure that serves 40+ internal teams. Strong foundation in Python, Go, and cloud platforms with a focus on reliability and developer experience.

EXPERIENCE

Infrastructure Engineer | Prism Labs | Boston, MA | January 2024 – Present

- Implemented LLM-powered code review suggestions integrated into GitHub Actions CI pipeline, reducing time-to-merge by ~15% for flagged PRs; system processes ~200 reviews daily across internal repositories
- Developed monitoring and alerting for build infrastructure using Prometheus and Grafana; collaborated with on-call rotation to respond to production incidents
- Contributed OpenTelemetry instrumentation to internal service mesh, enabling improved tracing visibility for 6 microservices
- Maintained Terraform modules for GCP infrastructure provisioning; code reviewed by senior platform team leads

Junior Infrastructure Engineer | Cascade Systems | Portland, OR | June 2023 – December 2023

- Built Python CLI tool for managing containerized local development environments; adopted by 30+ engineers across the organization
- Assisted in migration of legacy batch jobs from cron-based scheduler to Kubernetes; worked alongside senior engineer to validate correctness of 12 workflows in staging
- Debugged network connectivity issues in Docker Compose setups; documented troubleshooting patterns in internal runbooks
- Pair-programmed on API gateway configuration updates with networking team

Internship: Infrastructure | Threshold Analytics | Chicago, IL | June 2022 – August 2022

- Wrote Python scripts for automated log parsing and storage cost analysis across AWS accounts
- Tested disaster recovery procedures and documented runbooks for failover scenarios
- Assisted in evaluating open-source observability tools; created comparison summary for engineering leadership

TECHNICAL SKILLS

- Languages: Python, Go, Bash, SQL
- Cloud & Infrastructure: GCP (Compute Engine, Cloud Run), AWS (EC2, S3), Docker, Kubernetes, Terraform
- Developer Tools: GitHub Actions, GitLab CI, Prometheus, OpenTelemetry
- AI/ML: OpenAI API integration, prompt engineering, LangChain basics

EDUCATION

B.S. Computer Science | University of Massachusetts Amherst | 2022
