

Emil Kowalczyk

Production Engineer | Healthcare Infrastructure

(217) 554-8923 | emil.kowalczyk@email.com | Chicago, IL

CORE SKILLS

Kubernetes, Docker, Terraform, PostgreSQL, Redis, AWS (EC2, RDS, S3, CloudWatch), incident response, capacity planning, CI/CD pipelines, Linux systems administration, on-call rotation management, Python, Go

EXPERIENCE

Senior Production Engineer | Vitacore Health Systems | Chicago, IL | Jan 2023 – Present

- Manage Kubernetes cluster infrastructure serving 40+ clinical applications with 99.95% uptime SLA across three availability zones; 2M+ patient records processed daily
- Designed and implemented disaster recovery procedures reducing failover time from 45 minutes to under 8 minutes; led quarterly drills with clinical teams
- Optimized database query performance on PostgreSQL clusters handling real-time lab result ingestion, reducing P99 latency by 62% through indexing and connection pooling
- On-call rotation lead; handled 200+ production incidents annually with average resolution time of 18 minutes
- Mentored two junior engineers on debugging distributed system failures in healthcare workflows

Production Engineer | Meridian Diagnostic Services | Indianapolis, IN | Jun 2021 – Dec 2022

- Owned infrastructure supporting automated pathology image analysis pipeline processing 5,000+ specimens per day; maintained 99.8% availability for clinical labs across 12 states
- Built Terraform modules for reproducible infrastructure deployments; reduced onboarding time for new lab locations from 6 weeks to 2 weeks
- Implemented comprehensive monitoring and alerting on 50+ microservices using Prometheus and Grafana; cut mean-time-to-detection by 40%
- Collaborated with data science team to integrate a simple text classification model for report categorization via API calls; model ran inference on flagged documents with <100ms latency impact

Systems Administrator | Covenant Medical IT | Milwaukee, WI | Aug 2018 – May 2021

- Managed on-premises and cloud hybrid infrastructure supporting 15 hospital facilities and 8,000+ clinical staff
- Automated routine backup and recovery procedures using bash and Python; reduced manual administrative overhead by 30 hours per month
- Led migration of legacy monolith to containerized microservices architecture on AWS, improving deployment frequency from monthly to daily

EDUCATION

B.S. in Computer Science | University of Wisconsin–Madison | 2018
