

Wren Sutcliffe

Senior Production Engineer | Infrastructure & Reliability

Portland, OR 97201 | (503) 544-8821 | wren.sutcliffe@mailbox.com

CORE SKILLS

Languages & Frameworks: Python, Go, JavaScript, SQL | **Cloud & Infrastructure:** AWS (EC2, RDS, S3, Lambda, CloudFront), Kubernetes, Docker, Terraform | **Databases:** PostgreSQL, Redis, DynamoDB | **Monitoring & Observability:** Datadog, PagerDuty, CloudWatch, custom metrics | **Systems:** Load balancing, CDN optimization, database replication, API gateway configuration

PROFESSIONAL EXPERIENCE

Senior Production Engineer | Nexus Commerce — Portland, OR

March 2023 – Present

- Architected and deployed a multi-region e-commerce platform handling 8,000+ concurrent users during peak sales events; reduced latency from 450ms to 180ms through strategic CloudFront configuration and database query optimization
- Designed disaster recovery procedures for PostgreSQL clusters across three AWS regions with automated failover; achieved 99.95% uptime SLA and reduced MTTR from 45 minutes to 12 minutes
- Owned on-call rotation for 24/7 production support across 12 microservices; deployed automated alerting rules that cut false-positive pages by 68%
- Mentored four junior engineers on production troubleshooting, infrastructure-as-code practices, and incident response; led weekly architecture reviews
- Integrated third-party recommendation API that consumed product catalog data; configured caching layer to reduce API calls by 75% while maintaining data freshness

Production Engineer | RetailFlow Systems — Seattle, WA

June 2021 – February 2023

- Built Kubernetes infrastructure for a containerized order processing system that transitioned from on-premises to AWS; reduced deployment time from 4 hours to 8 minutes
- Implemented comprehensive monitoring stack across 40+ services using Datadog, including custom dashboards for inventory synchronization and payment processing pipelines
- Optimized RDS Aurora instance sizing and read replica configuration; eliminated database bottlenecks that were causing 2–3 second checkout delays
- Standardized Terraform modules for VPC, RDS, and ECS deployments; reduced infrastructure provisioning time by 50% across the team
- Collaborated with platform team to establish SLO targets (99.9% availability) and documented runbooks for 15 critical services

Infrastructure Engineer | CartConnect Ltd. — Seattle, WA

August 2019 – May 2021

- Maintained and scaled Redis clusters supporting real-time inventory tracking for 200+ retail partners; optimized memory usage and prevented key eviction through careful TTL strategy
- Deployed automated backup and restoration processes for e-commerce databases using AWS RDS snapshots; tested recovery procedures quarterly

- Assisted in migrating legacy monolithic application to microservices architecture on Kubernetes; coordinated with development teams on service dependencies and API contracts
- Automated infrastructure health checks using Python scripts and Lambda functions; proactively detected capacity issues 3–5 days before they would impact customers

Associate Infrastructure Engineer | DataVault Solutions — Boise, ID

July 2018 – July 2019

- Deployed and maintained PostgreSQL instances for SaaS product serving 50+ enterprise clients; managed replication, backups, and performance tuning
- Created runbooks and escalation procedures for common infrastructure incidents
- Assisted with load testing and capacity planning for quarterly product releases

EDUCATION

Bachelor of Science in Computer Science | University of Washington — Seattle, WA | Graduated 2018
