

Hugo Lindqvist

Senior Backend Engineer | Supply Chain Systems

Stockholm, Sweden | +46 8 742 5891 | hugo.lindqvist@mailbox.se

Professional Summary

Backend engineer with 6+ years building high-scale production systems in logistics and supply chain operations. Deep expertise in agent-based optimization, LLM integration for document processing, and infrastructure automation. Focused on solving complex technical problems in inventory management, route optimization, and demand forecasting systems serving hundreds of enterprise clients processing millions of transactions daily.

Experience

Senior Systems Engineer | Nexlog AB | Stockholm | 2023–Present

- Architected multi-agent supply chain orchestration system using Claude API and LangChain, processing real-time shipment data across 47 distribution centers; reduced planning cycles from 4 hours to 18 minutes through agentic decomposition of allocation, routing, and compliance tasks
- Engineered inventory forecasting pipeline integrating LLM-based demand anomaly detection with time-series models; handles 2.3M SKU predictions daily with <8% MAPE variance
- Built event-driven Kafka infrastructure for cross-warehouse inventory synchronization; maintains <300ms latency across 12 regional databases with 99.98% uptime

Backend Engineer | Logistix Systems | Gothenburg | 2020–2023

- Developed REST and gRPC APIs supporting warehouse management system used by 340+ facilities moving 8M pallets annually; implemented connection pooling and query optimization reducing P99 latency from 850ms to 120ms
- Designed cost optimization agent using reinforcement learning to allocate shipments across carriers; reduced network spend by 12% while maintaining service-level agreements
- Deployed containerized microservices on AWS ECS; configured auto-scaling policies and managed Terraform infrastructure across production and staging environments

Software Engineer | CargoFlow | Malmö | 2018–2020

- Built Python ETL pipelines ingesting customs documentation and bill-of-lading data; processed 15M+ documents monthly with 99.4% validation accuracy
- Implemented PostgreSQL schema redesigns for order tracking systems supporting 60K concurrent warehouse users

Technical Skills

Python, Go, SQL, PostgreSQL, AWS (EC2, RDS, Kinesis), Kafka, Docker, Terraform, Claude API, LangChain, gRPC, Redis
